

Acunetix Website Audit
21 December, 2015

Developer Report

Scan of https://ptt-loyalwb-t01.ptt.corp:443/loyalty_test

Scan details

| Scan information | |
|---------------------|----------------------|
| Start time | 18/12/2558 15:15:07 |
| Finish time | 19/12/2558 1:32:29 |
| Scan time | 10 hours, 17 minutes |
| Profile | Default |
| Server information | |
| Responsive | True |
| Server banner | Microsoft-IIS/8.5 |
| Server OS | Windows |
| Server technologies | ASP.NET |

Threat level

Acunetix Threat Level 3

One or more high-severity type vulnerabilities have been discovered by the scanner. A malicious user can exploit these vulnerabilities and compromise the backend database and/or deface your website.

Knowledge base

List of file extensions

File extensions can provide information on what technologies are being used on this website. List of file extensions detected:

- css => 10 file(s)
- js => 26 file(s)
- woff2 => 1 file(s)

Top 10 response times

The files listed below had the slowest response times measured during the crawling process. The average response time for this site was 807.42 ms. These files could be targetted in denial of service attacks.

1. /loyalty_test/member/showcaptchaimage, response time 8750 ms

GET /loyalty_test/member/showcaptchaimage?mode=0&value= HTTP/1.1

Vulnerable Javascript library

| Severity | High |
|--------------------|---|
| Туре | Configuration |
| Reported by module | Scripting (Javascript_Libraries_Audit.script) |

Description

You are using a vulnerable Javascript library. One or more vulnerabilities were reported for this version of the Javascript library. Consult Attack details and Web References for more information about the affected library and the vulnerabilities that were reported.

Impact

Consult Web References for more information.

Recommendation

Upgrade to the latest version.

References

Host header attack

| Severity | Medium |
|--------------------|---------------------------------------|
| Туре | Configuration |
| Reported by module | Scripting (Host_Header_Attack.script) |

Description

In many cases, developers are trusting the HTTP Host header value and using it to generate links, import scripts and even generate password resets links with its value. This is a very bad idea, because the HTTP Host header can be controlled by an attacker. This can be exploited using web-cache poisoning and by abusing alternative channels like password reset emails.

Impact

An attacker can manipulate the Host header as seen by the web application and cause the application to behave in unexpected ways.

Recommendation

The web application should use the SERVER_NAME instead of the Host header. It should also create a dummy vhost that catches all requests with unrecognized Host headers. This can also be done under Nginx by specifying a non-wildcard SERVER_NAME, and under Apache by using a non-wildcard serverName and turning the UseCanonicalName directive on. Consult references for detailed information.

HTML form without CSRF protection

| Severity | Medium |
|--------------------|---------------|
| Туре | Informational |
| Reported by module | Crawler |

Description

This alert may be a false positive, manual confirmation is required.

Cross-site request forgery, also known as a one-click attack or session riding and abbreviated as CSRF or XSRF, is a type of malicious exploit of a website whereby unauthorized commands are transmitted from a user that the website trusts.

Acunetix WVS found a HTML form with no apparent CSRF protection implemented. Consult details for more information about the affected HTML form.

Impact

An attacker may force the users of a web application to execute actions of the attacker"s choosing. A successful CSRF exploit can compromise end user data and operation in case of normal user. If the targeted end user is the administrator account, this can compromise the entire web application.

Recommendation

Check if this form requires CSRF protection and implement CSRF countermeasures if necessary.

Internal server error

| Severity | Medium |
|--------------------|----------------------------------|
| Туре | Validation |
| Reported by module | Scripting (Error_Message.script) |

Description

This page contains an error/warning message that may disclose sensitive information. The message can also contain the location of the file that produced the unhandled exception.

This may be a false positive if the error message is found in documentation pages.

Impact

The error messages may disclose sensitive information. This information can be used to launch further attacks.

Recommendation

Review the source code for this script.

Same site scripting

| Severity | Medium |
|--------------------|---------------------------------------|
| Туре | Configuration |
| Reported by module | Scripting (Subdomain_Takeover.script) |

Description

Tavis Ormandy reported a common DNS misconfiguration that can result in a minor security issue with web applications.

"It's a common and sensible practice to install records of the form "localhost. IN A 127.0.0.1" into nameserver configurations, bizarrely however, administrators often mistakenly drop the trailing dot, introducing an interesting variation of Cross-Site Scripting (XSS) I call Same-Site Scripting. The missing dot indicates that the record is not fully qualified, and thus queries of the form "localhost.example.com" are resolved. While superficially this may appear to be harmless, it does in fact allow an attacker to cheat the RFC2109 (HTTP State Management Mechanism) same origin restrictions, and therefore hijack state management data."

Impact

An attacker can cheat the RFC2109 (HTTP State Management Mechanism) same origin restrictions, and therefore hijack state management data.

Recommendation

It is advised that non-FQ localhost entries be removed from nameserver configurations for domains that host websites that rely on HTTP state management.

URL redirection

| Severity | Medium |
|--------------------|----------------------------------|
| Type | Validation |
| Reported by module | Scripting (XFS_and_Redir.script) |

Description

This script is possibly vulnerable to URL redirection attacks.

URL redirection is sometimes used as a part of phishing attacks that confuse visitors about which web site they are visiting.

Impact

A remote attacker can redirect users from your website to a specified URL. This problem may assist an attacker to conduct phishing attacks, trojan distribution, spammers.

Recommendation

Your script should properly sanitize user input.

ASP.NET version disclosure

| Severity | Low |
|--------------------|--|
| Туре | Configuration |
| Reported by module | Scripting (ASP_NET_Error_Message.script) |

Description

The HTTP responses returned by this web application include anheader named X-AspNet-Version. The value of this header is used by Visual Studio to determine which version of ASP.NET is in use. It is not necessary for production sites and should be disabled.

Impact

The HTTP header may disclose sensitive information. This information can be used to launch further attacks.

Recommendation

Apply the following changes to the web.config file to prevent ASP.NET version disclosure:

- <System.Web>
- enableVersionHeader="false" />
- </System.Web>

User-Agent: Mozilla/5.0 (Windows NT 6.1; WOW64; Trident/7.0; rv:11.0) like Gecko

Clickjacking: X-Frame-Options header missing

| Severity | Low |
|--------------------|---|
| Туре | Configuration |
| Reported by module | Scripting (Clickjacking_X_Frame_Options.script) |

Description

Clickjacking (User Interface redress attack, UI redress attack, UI redressing) is a malicious technique of tricking a Web user into clicking on something different from what the user perceives they are clicking on, thus potentially revealing confidential information or taking control of their computer while clicking on seemingly innocuous web pages.

The server didn't return an X-Frame-Options header which means that this website could be at risk of a clickjacking attack. The X-Frame-Options HTTP response header can be used to indicate whether or not a browser should be allowed to render a page inside a frame or iframe. Sites can use this to avoid clickjacking attacks, by ensuring that their content is not embedded into other sites.

Impact

The impact depends on the affected web application.

Recommendation

Configure your web server to include an X-Frame-Options header. Consult Web references for more information about the possible values for this header.

OPTIONS method is enabled

| Severity | Low |
|--------------------|--|
| Туре | Validation |
| Reported by module | Scripting (Options_Server_Method.script) |

Description

HTTP OPTIONS method is enabled on this web server. The OPTIONS method provides a list of the methods that are supported by the web server, it represents a request for information about the communication options available on the request/response chain identified by the Request-URI.

Impact

The OPTIONS method may expose sensitive information that may help an malicious user to prepare more advanced attacks.

Recommendation

It's recommended to disable OPTIONS Method on the web server.

Sensitive page could be cached

| Severity | Low |
|--------------------|---------------|
| Туре | Informational |
| Reported by module | Crawler |

Description

This page contains possible sensitive information (e.g. a password parameter) and could be potentially cached. Even in secure SSL channels sensitive data could be stored by intermediary proxies and SSL terminators. To prevent this, a Cache-Control header should be specified.

Impact

Possible sensitive information disclosure.

Recommendation

Prevent caching by adding "Cache Control: No-store" and "Pragma: no-cache" to the page headers.

Broken links

| Severity | Informational |
|--------------------|---------------|
| Туре | Informational |
| Reported by module | Crawler |

Description

A broken link refers to any link that should take you to a document, image or webpage, that actually results in an error. This page was linked from the website but it is inaccessible.

Impact

Problems navigating the site.

Recommendation

Remove the links to this file or make it accessible.

Affected items

/loyalty test/content/themes/pttbluecard/-

Details

For a complete list of URLs linking to this file, go to Site Structure > Locate and select the file (marked as "Not Found") > select Referrers Tab from the bottom of the Information pane.

Request headers

```

Description

One or more email addresses have been found on this page. The majority of spam comes from email addresses harvested off the internet. The spam-bots (also known as email harvesters and email extractors) are programs that scour the internet looking for email addresses on any website they come across. Spambot programs look for strings like myname@mydomain.com and then record any addresses found.

Impact

Email addresses posted on Web sites may attract spam.

Recommendation

Check references for details on how to solve this problem.

References

Email Address Disclosed on Website Can be Used for Spam

Microsoft IIS version disclosure

| Severity | Informational |
|--------------------|--|
| Туре | Configuration |
| Reported by module | Scripting (ASP_NET_Error_Message.script) |

Description

The HTTP responses returned by this web application include a header named Server. The value of this header includes the version of Microsoft IIS server.

Impact

The HTTP header may disclose sensitive information. This information can be used to launch further attacks.

Recommendation

Microsoft IIS should be configured to remove unwanted HTTP response headers from the response. Consult web references for more information.

References

Remove Unwanted HTTP Response Headers

Affected items

/

Details

Version information found: Microsoft-IIS/8.5

Request headers

GET / |~.aspx HTTP/1.1

Host: ptt-loyalwb-t01.ptt.corp

Connection: Keep-alive

Accept-Encoding: gzip,deflate

User-Agent: Mozilla/5.0 (Windows NT 6.1; WOW64; Trident/7.0; rv:11.0) like Gecko

Accept: */*

Password type input with auto-complete enabled

| Severity | Informational |
|--------------------|---------------|
| Туре | Informational |
| Reported by module | Crawler |

Description

When a new name and password is entered in a form and the form is submitted, the browser asks if the password should be saved. Thereafter when the form is displayed, the name and password are filled in automatically or are completed as the name is entered. An attacker with local access could obtain the cleartext password from the browser cache.

Impact

Possible sensitive information disclosure.

Recommendation

The password auto-complete should be disabled in sensitive applications.

To disable auto-complete, you may use a code similar to: <INPUT TYPE="password" AUTOCOMPLETE="off">

Affected items

/loyalty_test

Details

Password type input named password from form named frm_login with action /Loyalty_test/Member/RegisterContinue has autocomplete enabled.

Request headers

GET /loyalty_test HTTP/1.1

Pragma: no-cache

Cache-Control: no-cache

Host: ptt-loyalwb-t01.ptt.corp

Connection: Keep-alive

Accept-Encoding: gzip, deflate

User-Agent: Mozilla/5.0 (Windows NT 6.1; WOW64; Trident/7.0; rv:11.0) like Gecko

Accept: */*

Possible username or password disclosure

| Severity | Informational |
|--------------------|-------------------------------------|
| Туре | Informational |
| Reported by module | Scripting (Text_Search_File.script) |

Description

A username and/or password was found in this file. This information could be sensitive.

This alert may be a false positive, manual confirmation is required.

Impact

Possible sensitive information disclosure.

Recommendation

Remove this file from your website or change its permissions to remove access.

Affected items

/loyalty_test/bundles/jquery

Details
