Acunetix Website Audit

23 December, 2015

Developer Report

Scan of https://ptt-loyalwb-t01.ptt.corp:443/loyalty_test

Scan details

Scan information	
Start time	23/12/2558 9:26:41
Finish time	23/12/2558 13:26:26
Scan time	3 hours, 59 minutes
Profile	Default
Server information	
Responsive	True
Server banner	Microsoft-IIS/8.5
Server OS	Windows
Server technologies	ASP.NET

### Threat level

Acunetix threat level

Level 3: High

Acunetix Threat Level 3

One or more high-severity type vulnerabilities have been discovered by the scanner. A malicious user can exploit these vulnerabilities and compromise the backend database and/or deface your website.

Alerts distribution

Total alerts found   133

🔴 **High**	3	▮
🟡 **Medium**	27	▬▬▬

Alert details

⊘ Microsoft IIS tilde directory enumeration

Severity	**High**
Type	Configuration
Reported by module	Scripting (IIS_Tilde_Dir_Enumeration.script)

Description

It is possible to detect short names of files and directories which have an 8.3 file naming scheme equivalent in Windows by using some vectors in several versions of Microsoft IIS. For instance, it is possible to detect all short-names of ".aspx" files as they have 4 letters in their extensions. This can be a major issue especially for the .Net websites which are vulnerable to direct URL access as an attacker can find important files and folders that they are not normally visible.

Impact

Possible sensitive information disclosure.

Recommendation

Consult the "Prevention Technique(s)" section from Soroush Dalili's paper on this subject. A link to this paper is listed in the Web references section below.

🔴 Vulnerable Javascript library

Severity	**High**
Type	Configuration
Reported by module	Scripting (Javascript_Libraries_Audit.script)

Description

You are using a vulnerable Javascript library. One or more vulnerabilities were reported for this version of the Javascript library. Consult Attack details and Web References for more information about the affected library and the vulnerabilities that were reported.

Impact

Consult Web References for more information.

Recommendation

Upgrade to the latest version.

⚠ HTML form without CSRF protection

Severity	**Medium**
Type	Informational
Reported by module	Crawler

Description

This alert may be a false positive, manual confirmation is required.
Cross-site request forgery, also known as a one-click attack or session riding and abbreviated as CSRF or XSRF, is a type of malicious exploit of a website whereby unauthorized commands are transmitted from a user that the website trusts.

Acunetix WVS found a HTML form with no apparent CSRF protection implemented. Consult details for more information about the affected HTML form.

Impact

An attacker may force the users of a web application to execute actions of the attacker''s choosing. A successful CSRF exploit can compromise end user data and operation in case of normal user. If the targeted end user is the administrator account, this can compromise the entire web application.

Recommendation

Check if this form requires CSRF protection and implement CSRF countermeasures if necessary.

Reported by module	Scripting (Error_Message.script)

Description

This page contains an error/warning message that may disclose sensitive information. The message can also contain the location of the file that produced the unhandled exception.

This may be a false positive if the error message is found in documentation pages.

Impact

The error messages may disclose sensitive information. This information can be used to launch further attacks.

Recommendation

Review the source code for this script.

⚠ Same site scripting

Severity	**Medium**
Type	Configuration
Reported by module	Scripting (Subdomain_Takeover.script)

Description

Tavis Ormandy reported a common DNS misconfiguration that can result in a minor security issue with web applications.

"It's a common and sensible practice to install records of the form "localhost. IN A 127.0.0.1" into nameserver configurations, bizarrely however, administrators often mistakenly drop the trailing dot, introducing an interesting variation of Cross-Site Scripting (XSS) I call Same-Site Scripting. The missing dot indicates that the record is not fully qualified, and thus queries of the form "localhost.example.com" are resolved. While superficially this may appear to be harmless, it does in fact allow an attacker to cheat the RFC2109 (HTTP State Management Mechanism) same origin restrictions, and therefore hijack state management data."

Impact

An attacker can cheat the RFC2109 (HTTP State Management Mechanism) same origin restrictions, and therefore hijack state management data.

Recommendation

It is advised that non-FQ localhost entries be removed from nameserver configurations for domains that host websites that rely on HTTP state management.

ⓘ ASP.NET version disclosure

Severity	**Low**
Type	Configuration
Reported by module	Scripting (ASP_NET_Error_Message.script)

Description

The HTTP responses returned by this web application include anheader named X-AspNet-Version. The value of this header is used by Visual Studio to determine which version of ASP.NET is in use. It is not necessary for production sites and should be disabled.

Impact

The HTTP header may disclose sensitive information. This information can be used to launch further attacks.

Recommendation

Apply the following changes to the web.config file to prevent ASP.NET version disclosure:
<System.Web>
 <httpRuntime enableVersionHeader="false" />
</System.Web>

Accept: */*
```

ⓘ Clickjacking: X-Frame-Options header missing

Severity	**Low**
Type	Configuration
Reported by module	Scripting (Clickjacking_X_Frame_Options.script)

Description

Clickjacking (User Interface redress attack, UI redress attack, UI redressing) is a malicious technique of tricking a Web user into clicking on something different from what the user perceives they are clicking on, thus potentially revealing confidential information or taking control of their computer while clicking on seemingly innocuous web pages.

The server didn't return an X-Frame-Options header which means that this website could be at risk of a clickjacking attack. The X-Frame-Options HTTP response header can be used to indicate whether or not a browser should be allowed to render a page inside a frame or iframe. Sites can use this to avoid clickjacking attacks, by ensuring that their content is not embedded into other sites.

Impact

The impact depends on the affected web application.

Recommendation

Configure your web server to include an X-Frame-Options header. Consult Web references for more information about the possible values for this header.

🛈 Cookie without Secure flag set

Severity	**Low**
Type	Informational
Reported by module	Crawler

Description

This cookie does not have the Secure flag set. When a cookie is set with the Secure flag, it instructs the browser that the cookie can only be accessed over secure SSL channels. This is an important security protection for session cookies.

Impact

None

Recommendation

If possible, you should set the Secure flag for this cookie.

OPTIONS method is enabled

Severity	**Low**
Type	Validation
Reported by module	Scripting (Options_Server_Method.script)

Description

HTTP OPTIONS method is enabled on this web server. The OPTIONS method provides a list of the methods that are supported by the web server, it represents a request for information about the communication options available on the request/response chain identified by the Request-URI.

Impact

The OPTIONS method may expose sensitive information that may help an malicious user to prepare more advanced attacks.

Recommendation

It's recommended to disable OPTIONS Method on the web server.

⚠️ Sensitive page could be cached

Severity	**Low**
Type	Informational
Reported by module	Crawler

Description

This page contains possible sensitive information (e.g. a password parameter) and could be potentially cached. Even in secure SSL channels sensitive data could be stored by intermediary proxies and SSL terminators. To prevent this, a Cache-Control header should be specified.

Impact

Possible sensitive information disclosure.

Recommendation

Prevent caching by adding "Cache Control: No-store" and "Pragma: no-cache" to the page headers.

ⓘ Slow response time

Severity	**Low**
Type	Informational
Reported by module	Crawler

Description

This page had a slow response time. This type of files can be targeted in denial of service attacks. An attacker can request this page repeatedly from multiple computers until the server becomes overloaded.

Impact

Possible denial of service.

Recommendation

Investigate if it's possible to reduce the response time for this page.

Affected items

/Loyalty_test/Member/CheckExistingPhoneNo

Details

The response time for this page was 8750 ms while the average response time for this site is 406.28 ms

Request headers

ⓘ Email address found

Severity	**Informational**
Type	Informational
Reported by module	Scripting (Text_Search_File.script)

Description

One or more email addresses have been found on this page. The majority of spam comes from email addresses harvested off the internet. The spam-bots (also known as email harvesters and email extractors) are programs that scour the internet looking for email addresses on any website they come across. Spambot programs look for strings like myname@mydomain.com and then record any addresses found.

Impact

Email addresses posted on Web sites may attract spam.

Recommendation

Check references for details on how to solve this problem.

References

[Email Address Disclosed on Website Can be Used for Spam](#)

Microsoft IIS version disclosure

Severity	**Informational**
Type	Configuration
Reported by module	Scripting (ASP_NET_Error_Message.script)

Description

The HTTP responses returned by this web application include a header named Server. The value of this header includes the version of Microsoft IIS server.

Impact

The HTTP header may disclose sensitive information. This information can be used to launch further attacks.

Recommendation

Microsoft IIS should be configured to remove unwanted HTTP response headers from the response. Consult web references for more information.

References

[Remove Unwanted HTTP Response Headers](#)

Affected items

/
Details
Version information found: Microsoft-IIS/8.5
Request headers

```
GET /|~.aspx HTTP/1.1
Host: ptt-loyalwb-t01.ptt.corp
Connection: Keep-alive
Accept-Encoding: gzip,deflate
User-Agent: Mozilla/5.0 (Windows NT 6.1; WOW64; Trident/7.0; rv:11.0) like Gecko
Accept: */*
```

🛈 Password type input with auto-complete enabled

Severity	**Informational**
Type	Informational
Reported by module	Crawler

Description

When a new name and password is entered in a form and the form is submitted, the browser asks if the password should be saved.Thereafter when the form is displayed, the name and password are filled in automatically or are completed as the name is entered. An attacker with local access could obtain the cleartext password from the browser cache.

Impact

Possible sensitive information disclosure.

Recommendation

The password auto-complete should be disabled in sensitive applications.
To disable auto-complete, you may use a code similar to:
<INPUT TYPE="password" AUTOCOMPLETE="off">

Affected items

/loyalty_test

Details

Password type input named password from form named frm_login with action /Loyalty_test/Member/RegisterContinue has autocomplete enabled.

Request headers

```
GET /loyalty_test HTTP/1.1
Pragma: no-cache
Cache-Control: no-cache
Cookie:
__RequestVerificationToken_L0xveWFsdHlfdGVzdA2=o90J9wEsslwU7kXfMJPuD1AfuCjfpS9x1XNooAZyr

Accept: */*
```

Possible username or password disclosure

Severity	**Informational**
Type	Informational
Reported by module	Scripting (Text_Search_File.script)

Description

A username and/or password was found in this file. This information could be sensitive.

This alert may be a false positive, manual confirmation is required.

Impact

Possible sensitive information disclosure.

Recommendation

Remove this file from your website or change its permissions to remove access.

Affected items
